Service / Dispatch

Fluidics' pioneering initiatives in the computerized dispatch area have set new standards against which other mechanical maintenance providers are measured.

Through our advanced communications and computerized dispatch operations, Fluidics provides 24-hour response to clients' emergency needs 365 days a year. Preventive maintenance on our clients' equipment is also provided through maintenance contracts of several types, from simple inspection to full parts and labor. Our computerized maintenance program enables us to maintain equipment lists and complete service histories, which are regularly referenced to assist in the diagnosis and resolution of problems while the mechanic is on site. All information is available to the client, thus providing an invaluable management tool for building owners/managers.

Prompt, Reliable Service Assures Tenant Comfort

Fluidics' mechanics respond in fully equipped maintenance vehicles with inventories of replacement parts to expedite repairs. These repairs range from simple equipment adjustments to major chiller retrofits/repairs performed by our team of high tonnage experts.

In addition to years of apprenticeship training, routine refresher and new product training is provided monthly to our mechanics through suppliers, manufacturers, and other in-house experts. All of our Service/Dispatch staff hold the universal EPA certification to handle CFC's in compliance with EPA #606 regulations reenacted in 1993.

Through creative "Partnering" arrangements with key clients, the Service/Dispatch Division can assign a team of mechanics to work exclusively for the client and its maintenance staff, thus ensuring the portfolio will continue to run smoothly.
