- » Single-source solutions: design, install, monitor, and maintain
- » Over 50 years of industry experience
- » Extensive prefabrication capabilities

Professional Service—24/7/365

EMCOR Services Fluidics has a fully equipped fleet of service vehicles ready to respond to your maintenance requests 24/7/365. We leverage the latest digital communications and dispatch technologies to help provide more reliable and efficient service.

Cutting-Edge Dispatch Technology

By pioneering the integration of digital and mobile device technology into our dispatch operations, Fluidics has become one of Pennsylvania's preeminent service providers. Our GPS-enabled maintenance vehicles have fully equipped inventories of replacement parts, helping expedite repairs.

We use a web-based work order management program which maintains equipment lists and complete service histories that our mechanics can reference on-site to assist in diagnosis and repair. All information is also available to the client, providing an invaluable management tool for building owners and managers.

Experienced Service Professionals

Our service team has extensive, hands-on experience working with a range of mechanical equipment. We have the capacity to handle everything from simple equipment adjustments to major chiller retrofits/repairs.

Along with years of apprenticeship training, routine refresher and new product training is regularly provided to our mechanics through suppliers, manufacturers, and other in-house experts. Additionally, all of our service staff hold the universal Environmental Protection Agency certification to handle chlorofluorocarbons.

Maintenance Agreements that Fit Your Needs

We offer facilities preventive maintenance through a number of contract agreements, ranging from simple inspection to full parts and labor. Creative "partnering" arrangements are also available, which assign a team of mechanics to work exclusively for you and your maintenance staff helping ensure your portfolio continues to run smoothly.
